IN-MIGRATION PROJECT FOR İSTANBUL, İZMİR, ANKARA AND BURSA METROPOLITAN MUNICIPALITIES

Photograph: Evren ÖZESEN

"Support to the Solution of Economic and Social Integration Problems in İstanbul, İzmir, Ankara and Bursa as Major In-Migrant Destinations", Project (İGEP) has begun to be implemented as of December 2009, with 18 months in duration and a 8 M EUR budget.

The project is funded by the European Union and is implemented by İstanbul, İzmir, Ankara and Bursa Metropolitan Municipalities, with the technical assistance of the Human Dynamics, ICMPD, TEPAV, TESEV, WYG International Consortium, led by DeLeeuw International.

One of the most outstanding features of the project is its target groups, which are disadvantaged groups, and among them, the most disadvantaged, children at risk. Besides, the strategic planning capacities of the Metropolitan Municipalities will be improved in order to support local authorities in tackling with the socio-economic difficulties in the regions that the urban poor reside.

As regards Strategic Planning, trainings in preparation of Strategic Action Planning, Strategic Environmental Assessment (SEA), preparation of feasibility studies and Environmental Impact Assessment (EIA) will be delivered and Strategic Action Plans, Operational Programmes and at least two infrastructure projects for each of the concerned Metropolitan Municipalities will be prepared. The infrastructure projects developed by the Metropolitan Municipalities will also be supported in seeking international funding via preparation of investment packages for International Finance Institutions (IFIs), through which sustainability will be maintained.

In each of the project provinces, with a separate EU financed supply tender, Children Centres aiming at rehabilitating children working and living on the streets and reintegrating them into educational life, have been established. In this respect, an integrated approach for social services delivery in this particular area will be established, common operational standards, mission statements and work programmes for each Centre will be developed, a web based children tracking system will be designed and implemented, counselling services to families against intra-family problems will be delivered, education and information campaigns against domestic violence and counselling against drug abuse and integration of drug users among others will be conducted. These Centres will deliver services to 1020 children.

By the time the implementation of İGEP is completed, it will be a model for future projects with similar purposes.
